...the perfect tool for your cosmetic pencil

KUM®

KUM® TIPFOR®MER SYSTEM

The **KUM®** Tipfor**®**mer System offers individual point shaping of each cosmetic pencil.

Why individual point shaping?

Most make-up pencils have a very soft cosmetic formula as a lead, which is best applied with a short tip to delicate areas of facial skin. However some pencils, such as brow pencils and nail whiteners have very firm leads that need to be sharpened to a sharp pointed tip for effective application. With the **KUM®** Tipfor**®**mer System you may individualize the tip of your pencil by shaping it either for shading in broad areas of skin or for creating fine accents and lines. With the **KUM®** Tipfor**®**mer System you may choose the pencil tip and lenght you like best.

TIPFOR®MER 9000 2TF
offers you both above-mentioned techniques in one product - by means of an extractable 2 Tipformer.

Round point   Sharp point
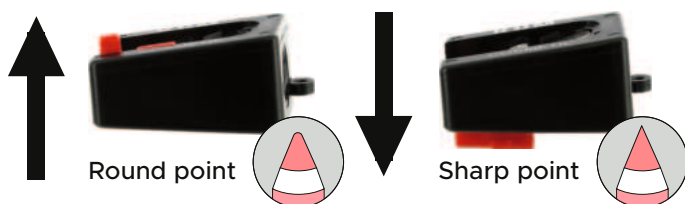

TIPFOR®MER 9000 TF
offers a round tip - for delicate areas of facial skin.

TECHNICAL SPECIFICATION

It is easy to clean the **KUM®** Tipfor**®**mer System. There is a large opening for access to the debris generated by the blade.
Cleaning Stick: This is the only instrument you should clean your sharpener with. Any metal object would ruin the cutting blade. The high-carbon steel blade is equipped with Dynamnic Torsion Action, which keeps it under positive tension during the sharpening process. The blade adjusts dynamically to the different forces bearing on the pencil while sharpening. These forces arise from the various materials in the pencil casing and the lead, as today's pencils can be made from an extremely wide variety of woods, plastics and cosmetic formulas.

The Dynamnic Torsion Action of the **KUM®** main blade is due in part to its shape, a slight positive curve. If a straight blade were to be mounted onto the sharpener body, it would bend to a slight negative curve under the sharpening forces, and this would not allow a proper cut.

KUM® has developed the technology called Dynamic Torsion Action for the most demanding types of pencils available on the market today. **KUM®** pencil sharpeners are the only sharpeners equipped with the specially manufactured blades that apply Dynamic Torsion Action to all types of pencils to produce the nicest pencil tips.

Ø 8 mm & 12 mm
Lid & Bottom Waste Container, with Cleaning Stick

	ArtNr.	VP	Carton
9020 TF	602.19.11	12	804

PCR

PCR stands for **Post-Consumer-Recycled** material. PCR materials are recycled plastics that are obtained from household or commercial waste, the majority of which consists of packaging materials.

PCR is environmentally friendly for several reasons:

» It saves natural resources, which means that there are less CO_2 emissions during oil production.

» A new product is being created instead of an old product being dumped on a landfill, dropped in the ocean, or disposed of in a waste incinerator, thus generating more CO_2 emissions.

» Plastic that is discarded in nature (e.g. in the ocean), breaks down into micro-plastic, which cannot be seen with the naked eye, and ends up in our food chain. Recycling is a way to avoid this.

KUM® 9005 TF PCR

Ø 8 mm
Equipped with Cleaning Stick, without
Waste Container

	ArtNr.	VP	Carton
9005 TF PCR	601.23.11	20	3600

KUM® 9020 TF PCR

Ø 8 mm & 12 mm
Without Waste Container, equipped with
Cleaning Stick
