

KUM-PCR Post-Consumer Recycled

We have taken it a step further,
KUM-PCR Products
now available. Please contact us
for more Information.

So...what exactly does PCR
(post-consumer recycled) mean?

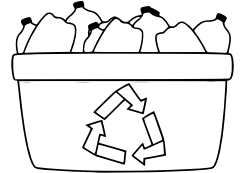

Do you ever wonder what happens to all those
milk jugs, drink bottles, shampoo and
shower gel bottles as well as plastic housing
of household products that you put out on
recycling day, or bring to the recycling center ?

Plastics are cleaned and turned into pellets
before being reprocessed into food-safe,
FDA-approved plastic products.

So, the more you recycle those milk jugs
and bottles, the more PCR material
companies like ours have access to,
which helps us rely less and less on
virgin plastic. To further divert waste,
we also use pre-consumer recycled materials,
which are materials that are recycled or
utilized after the manufacturing process,
but never make it to consumers.

For example, plastic shavings collected
during the manufacturing process.
